

FrontRow Juno Helps Seniors Stay Active & Engaged

Today's seniors are more active than ever. With so many activities available to them in senior centers, a quality sound system is important to help with sound amplification at events to keep everyone engaged and interested. FrontRow's Juno sound system can easily be moved to different rooms to provide voice amplification or music for events. Juno can also deliver sound directly to participant's hearing aids. Juno is a great addition to any senior center.

Juno can be used in a variety ways:

- Connect it to a TV in the lounge area
- Use it in a kitchen or craft room during group activities
- Use it in the front entrance or foyer for receptions and staging of transportation
- Multiple mics can be used to improve communication in small groups

Benefits of the Juno system:

- Improves the quality of life for residents
- Easy to use. No training required.
- Cost effective for small rooms
- Juno can deliver clear audio directly to senior's hearing aids
- Juno's sound quality makes it much more than a consumer grade audio system

FrontRow's history:

Founded in 1963, FrontRow makes technology for effortless communication in many environments. We are active in classroom sound, automated lesson capture, audio-visual room control, and campus-wide communication and control.
